DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-3, 7-8, 12-14 and 29-30 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-3, 7-8, 12-14 and 29-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Thoma (US 5,177,662).

Regarding claim 1, Thoma discloses a sensor (10) comprising:

- an elongate first conductor (12);
- an elongate second conductor (13); and
- a non-conductive web/dielectric (11) intermediate the first polymeric conductor and the second polymeric conductor to maintain a substantially fixed separation distance between the first and the second polymeric conductor (figure 1).

Application/Control Number: 10/643,839

Art Unit: 2831

Regarding claim 2, Thoma discloses at least one of the first and the second polymeric conductors has one of a rectangular (figure 1).

Regarding claim 3, Thoma discloses the first and the second polymeric conductors are directly bonded to the non-conductive web (figure 1).

Regarding claim 7, Thoma discloses the first polymeric conductor and the second polymeric conductor are embedded in a non-conductive polymer (figure 1).

Regarding claim 8, Thoma discloses a non-conductive web provides a maximum and minimum separation of the first and second polymeric conductors (figure 1).

Regarding claim 12, Thoma further discloses a non-conductive body embedding the first and second polymeric conductors (figure 1).

Regarding claim 13, Thoma disclose the non conductive body has one of a rectangular (figure 1)

Regarding claim 14, Thoma discloses the non-conductive body is integral with the web (figure 2).

Regarding claim 29, Thoma discloses a capacitive sensor (21), comprising a conductor (24) embedded within a non-conductive polymeric body (22), a cross sectional periphery of the polymeric conductor substantially defined by the body (figure 2).

Regarding claim 30, Thoma discloses the polymeric body defines at least a portion of a weather-seal (figure 2).

Application/Control Number: 10/643,839

Art Unit: 2831

Allowable Subject Matter

4. Claims 9-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

With respect to claims 9-11, the prior art alone or in combination does not teach the limitation of a sensor further comprising a secondary conductor in at least one of the first polymeric conductor and the second polymeric conductor.

5. Claims 15-20, 23-28 and 31-37 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 15-20, and 23-28 the prior art alone or in combination does not teach the limitation of an elongate capacitive sensor for installation about an opening in a motor vehicle, the opening having at least one corner, the sensor comprising:

- a one-piece extruded non conducting body; and
- the body configured to substantially maintain a nominal separation
 distance between the first polymeric conductor and the second polymeric
 conductor after installation about the corner.

With respect to claims 31-33, the prior art alone or in combination does not teach the limitation of a method manufacturing a capacitive sensor for installation about a motor vehicle opening having at least one corner, the method comprising steps of forming a web configured to substantially maintain the separation distance upon installation about the corner.

With respect to claims 34-37, the prior art alone or in combination does not teach the limitation of a capacitive sensor comprising: a web and first and second polymeric conductor defining a radius of curvature and the web maintaining a substantially fixed separation distance between the first and the second polymeric conductor along the radius of curvature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nguyen T. Ha whose telephone number is 571-272-1974. The examiner can normally be reached on Monday-Friday from 8:30AM to 6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on 571-272-2800 ext. 31. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

Application/Control Number: 10/643,839 Page 6
